

Coffee Sales Performance & Dashboard Report

Operational & Strategic Performance Review • 2019 – 2022

This executive report provides a thorough performance analysis of retail coffee operations utilizing multi-year transactional ledger data captured between **January 2, 2019**, and **August 19, 2022**. In addition to delivering key strategic insights on product performance and consumer profiles, it outlines the core technical architecture used to construct your interactive analytical Excel Dashboard.

I. Commercial Insights & Product Performance

1. Geographic Revenue Concentration

Operational revenue exhibits an extreme geographical density, with the **United States** generating **\$35,638.89 (78.96%)** of total global sales. Western European expansions represent smaller, developing market shares, with **Ireland** accounting for **\$6,696.87 (14.84%)** and the **United Kingdom** driving **\$2,798.51 (6.20%)**. Expanding European footprints stands out as a clear long-term growth vector.

2. Coffee Varietal & Roast Preferences

Customer bean selection is highly diversified and remarkably balanced across four major categories, indicating a customer base with sophisticated, varied palettes. The rare and complex flavor profiles of **Excelsa** and **Liberica** lead consumer demand, while classic **Robusta** finishes with the lowest total revenue share:

Coffee Varietal	Total Revenue (\$)	Sales Share (%)	Primary Taste Profile Reference
Excelsa	\$12,306.44	27.27%	Tart, fruity, dark, and mysterious notes
Liberica	\$12,054.08	26.71%	Smoky, woody, intense flavor profile
Arabica	\$11,768.50	26.07%	Sweet, smooth, high-acidity classic profile
Robusta	\$9,005.25	19.95%	Strong, bold, deep bitter notes, high caffeine

Simultaneously, roast levels dictate customer purchasing habits. **Light Roasts** represent the primary commercial success, generating **\$17,354.47 (38.45%)**. Medium Roasts followed at **\$14,600.48 (32.35%)**, and Dark Roasts secured **\$13,179.32 (29.20%)**.

3. Loyalty Customer Segmentation & Top Spenders

The loyalty program is a major revenue engine, contributing **\$20,917.85 (46.35%)** of total sales. High-value loyalty cohorts consistently drive repeat transactions and maintain higher lifetime values. Top consumer accounts identified by the dynamic dashboard ranking include:

Rank	Customer Name	Cumulative Expenditure (\$)
1	Allis Wilmore	\$317.07
2	Brenn Dundredge	\$307.05
3	Terri Farra	\$289.11
4	Nealson Cuttler	\$281.68
5	Don Flintiff	\$278.01

II. Technical Architecture & Methodology

The interactive Excel system that hosts this project is built upon a standard three-layer database architecture to maximize processing performance, avoid static data entries, and deliver clean UI interactivity:

- 1. Relational Data Normalization:** Raw facts in the orders ledger are linked to operational master sheets (customers and products). Instead of fragile hardcoded cells, complex lookups were established using the INDEX and MATCH function combinations. This enables automatic dynamic recalculation of Customer Name, Country, Coffee Type Name, Size, and Unit Prices across the system.
- 2. Aggregation & Business Logic:** Standard PivotTables extract and process the transactional record to fuel visualization elements, isolating sales trends by month/year, ranking top loyalty customers, and grouping country-level performances.
- 3. Interactive Slicers & UI Design:** The presentation dashboard leverages unified color schemes, clean chart structures, and interconnected slicers for *Roast Type*, *Package Size*, and *Loyalty Status*. These filters update all visual data across the interface instantly, facilitating rapid decision-making.

III. Strategic Recommendations

1. Targeted European Marketing & Product Placement

Since Light Roast bean options drive the highest revenue block and are highly preferred in specialty Western European coffee cultures, launching targeted digital ads featuring premium **Light Roast Excelsa** and **Liberica** to customers in Ireland and the UK could significantly accelerate market share growth in those regions.

2. Drive Loyalty Program Conversions

Loyalty program members represent almost half of all revenues. Converting the remaining 53.7% of non-member transactions is the most cost-effective way to scale revenue. Introduce a small incentive (e.g., "Save 10% on your next order") to convert guest checkouts into loyalty accounts.

3. Dynamic Inventory Adjustments

Optimize warehousing costs by shifting purchasing volume. Scale down raw Robusta inventory by roughly 15-20% and redirect that capital budget to satisfy the much higher demand for premium Excelsa and Liberica beans, focusing on maintaining strong supplies of Light Roast variants.
